Technical documentation

TECHNICAL FEATURES

USE

Giacomini ball valves are designed to provide high mechanical resistance minimizing the required space and guarantee operation with very high working pressures. The Finishings used are suitable for hot and cold water systems, domestic water, gases, hydrocarbons, compressed air and dry saturated vapor. The inner anti-tampering stem assembly makes it suitable for use on indoor and outdoor gas distribution lines. The wide range of products provides the right solution for any need.

STANDARD PORT AND FULL PORT

Standard port ball valves feature a port free section not lesser than 75 % of the pipe on which they should be assembled. Full port ball valves instead provide a port free section corresponding to the pipe.

BALL VALVES MAIN COMPONENTS

DADO ball

DADO balls are an exclusive design by Giacomini revolutionizing the world of ball valves. Their "cubic" shape enable to remove impurities from the seal seat, preventing damages to gaskets during opening and closing. The flow impurities settle on the ball flat face and are then removed from the fluid current. The limited contact between the ball and the seal seats reduces friction between the components and the valve maneuvering torque is thus lesser than 15/20 % compared to the one required by a traditional ball. The combination of these factors extends the useful life of PTFE gaskets.

QUALITY

The first company's Quality Management System ISO 9002 was certified in 1986 and was extended to ISO 9001 (the actual UNI EN ISO 9001:2008) in 1996. Subsequently, the Environmental Management System UNI EN ISO 14001:2004 of the company's manufacturing sites and goods export procedure were quality certified. Finally, the Occupational Health and Safety System is being certified to BS OHSAS 18001:2007. The next internal goal is to achieve the most recent energy and ethics certification.
