Pressure independent control valve (PICV)

Datasheet / Instruction
0782EN  11/2022

R206AM is a pressure independent control valve (PICV) that combines an automatic flow rate regulator and a control valve with actuator.

The valve can adjust flow rate and keep it constant in the presence of changing differential pressure conditions of the circuit in which it is installed.

Flow rate is adjusted in two different ways:

- **manually** on the automatic flow rate regulator, to restrict the maximum value;
- **automatically** by the control valve in combination with a proportional (0÷10 V) or ON/OFF actuator, in accordance with the thermal load requirements of the section of the circuit to be controlled.

The set flow rate is guaranteed inside the declared range of differential pressure, with a maximum error of $\pm 10\%$ on controlled flow rate value or $\pm 5\%$ on the maximum flow rate.

The valve is equipped with pressure outlets for measuring the differential pressure in combination with a differential pressure gauge and its own probes (please refer to the following page for the complete regulation tables of different valve types).

► Technical data

Performance

- Fluids: water and glycol solutions (max. 50 % of glycol)
- Maximum working temperature: 120 °C
- Room temperature: 1÷50 °C
- Maximum working pressure: 25 bar
- Working differential pressure range: see table "Versions and product codes"
- Maximum close-off differential pressure with actuator: 8 bar
- Actuator connections: M30 x 1,5 mm
- Leakage rating: Class 4 (IEC60534-4)
- Maximum seat leakage: Class IV (in accordance with IEC60534-4)

Materials

- Body: brass CW617N - UNI EN 12165
- Cartridge:
 - Insert: glass reinforced PSU/POM/PPS
 - Diaphragm: EPDM
 - Internal metal components: stainless steel
 - O-Rings: EPDM
 - Stopper: PPS

► Flow rate presetting

To set the valve according to the desired flow rate, using a 8 mm wrench, rotate the stem valve clockwise to decrease the setting; counterclockwise to increase the setting.

Flow rate diagrams

Accuracy: highest between ± 10 % in case of controlled flow rate or ± 5 % in case of maximum flow rate.

Installation

The R206AM valve should be installed on the return side of the system.

It is recommended to install a filter upstream the R206AM valve to prevent damage or blockage due to debris.

Furthermore, it is recommended not to exceed the maximum differential pressure control range of the cartridge.

NOTE: Failure to abide by all recommendations as per this installation and operation instruction will void warranty.
